

GREEN GUARDIAN

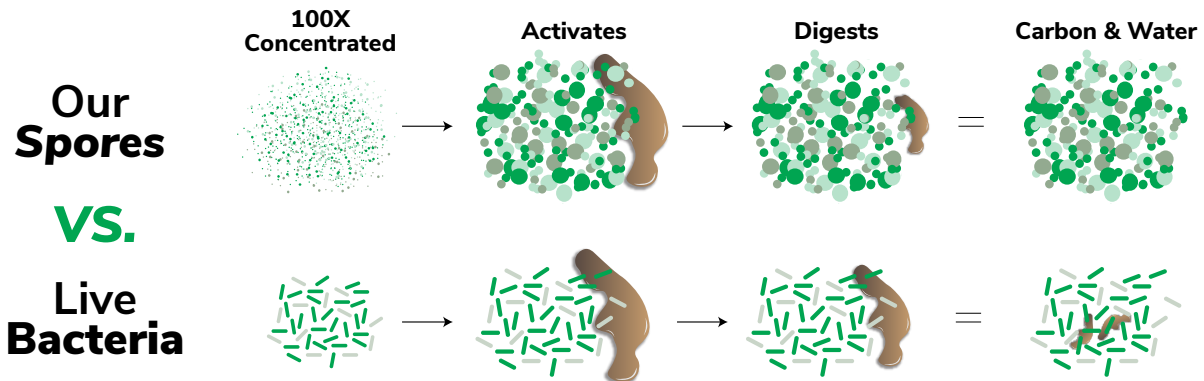

100X Concentrate

Bacterial Solutions & Dispenser System

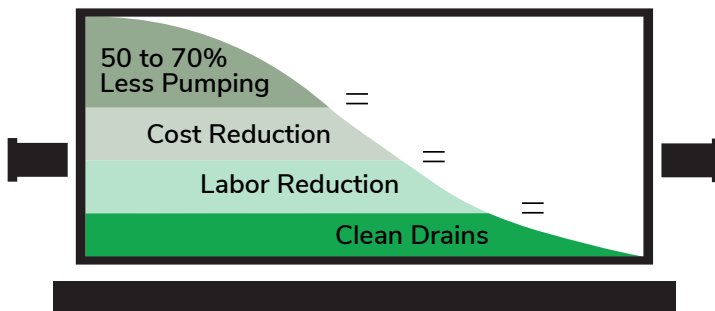

- 1 Uses ultra high bacillus bacterial (spores) **concentrate** which is automatically dispensed.
- 2 The spores contain **5.5 Billion** colony forming **units per gallon** (CFUs)
- 3 Once the bacteria spores come in contact with **food & grease** in the drain it activates immediately.

Compared to live bacteria, **spores are 100X concentrated** which is a compact version able to dispense more bacteria into the drains versus live bacteria.

Other drain systems use chemical enzymes that emulsifies, BUT it reformulates as a brick in the grease trap, which is a temporary fix.

Green Guardian Dispenser is more efficient and compact compared to other designs and techniques.

BENEFITS:

- Drain flies will disappear
- Odors will dissipate
- The drain will not back up
- Reduction of grease in grease trap
- Easy installation
