

Care and Maintenance

Keep your kitchen or bath cabinetry looking its best with these simple maintenance instructions.

Dusting

Dust cabinets periodically to remove loose particles. A clean cloth is all that is required. Do not use pre-moistened dusting sheets. They are not needed or recommended.

Spills

Clean spills immediately with a soft cloth. Prolonged exposure to oils, food materials or liquids can cause staining on your cabinets.

General Cleaning

Use a solution of a mild dishwashing soap and warm water. Apply to your cabinets with a soft cloth. Use a damp cloth to remove any soap film. Immediately dry your cabinets with a clean soft cloth.

You do not need to use strong cleaners for normal everyday cleaning. Do not use abrasive cleaners or cleaners containing bleach or silicon.
